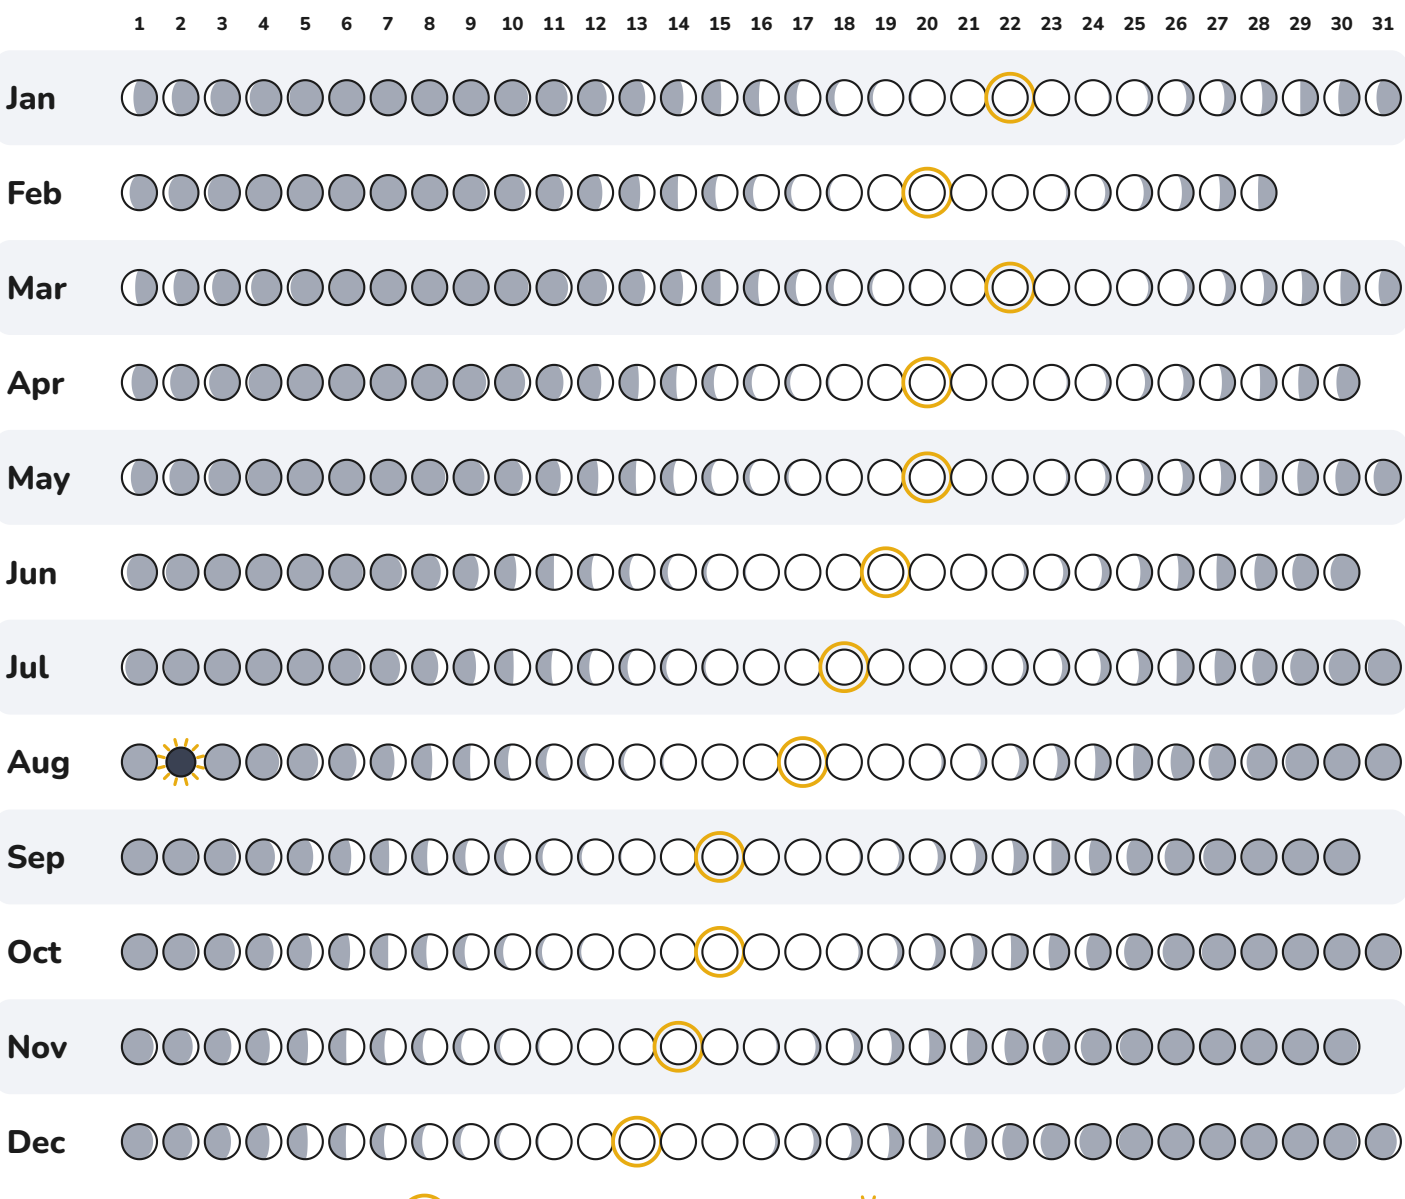
ORBY'S SPACE ACADEMY
BY ORBITAL RADAR

Name: _____

MOON WATCH · NORTHERN HEMISPHERE

Moon calendar 2027



On 2 August, people in Spain, North Africa and the Middle East will see the Moon cover the Sun.

Orby says:

The Moon doesn't shine by itself. We see the part the Sun lights up, so its shape changes every night. Full Moon to full Moon takes about 29 and a half days!

YOUR MISSION

1. Each night you see the Moon, color it yellow.
2. Find your birthday. What shape will the Moon be?

_____

GROWN-UPS: scan for tonight's Moon where you live. The dates use world time (UTC), so a full Moon can come a day early or late for you.
